

Valleyres. Vaud. Switzerland.
August 17th 1875.

Dear Sir,

Your very kind note of
July 23^d came duly to hand with
the samples of Guadalupe Island
Epilobium N^o 31 which I do not
think is a new species, but a
form of *E. minutum* Lindley.
I have put it ~~with~~ in the Gray
Herbarium with other samples. -
Those barren islands of the Pacific
coast have, they say, a scanty
but very interesting vegetation. -

in your very kind note, any mention of your health, as
we took it as a sign of your being perfectly well.
Hoping that these lines will find you as well
I remain, dear Sir,

your most respectfully

Walter Panberg

Your ship was duly forwarded to St. Willer, who
has been appointed Director de Jardin Botanique de
Genève, position which was formerly held by our lamented
friend Rastou.

M^r Boissier would like very much to have a share in the small collection which are to be distributed next fall. He begs to be kindly remembered to you and rejoices at the idea of having a list of names of the Kellogg Cal. plants. -

I have just received a sketch of *E. suffuticulosum* & *E. obcordatum* for my draughtsman in Paris. I have successfully cultivated here at Vallejo this summer your most pretty *E. obcordatum*.

It has well ^{to} forward and hope that in a few days I will be able to forward to Paris a fruit to have it drawn, as it was not to be found in the dried specimens. - As soon I have the printed proofs I will forward you a specimen. The first part of *Stem. Orientalis* vol III has just come ^{sent} the other day for the printer; the III vol. will be out in a few days. -
We rejoice with M^r Boissier at not finding
